

# StarShip Ecosystem Whitepaper

The decentralized market is full of cryptocurrencies with a multitude of purposes and intentions. From stablecoins such as USDT and BUSD, smart contract blockchains such as Ethereum and Binance Smart Chain, meme/"shit" coins such as DOGE and SafeMoon, and, of course, the ever-prominent "gold standard" Bitcoin, each coin aims to garner its share of the market while, at the same time, solving real-world problems. Whether it be to sever society's reliance on centralized banking systems, provide instant-execution of conditions for a smart contract, or simply provide entertainment in the form of a meme (DOGE) or gambling via quick pump and dumps ("shit" coins), each cryptocurrency is created with a purpose.

Today's market has seen a dramatic increase in deflationary tokens. Their popularity, driven by the promise of perpetual growth, is understandable with a handful of projects seeing extremely high returns in very short timeframes. Few of these tokens offer real-world, practical use-case. Included in those few, even the best of DeFi projects fail to account for the necessary liquidity required for long-term, sustainable growth in token value.

Lack of use case and liquidity threaten the lifespan of these projects and result in a price bubble, which, when burst, causes a collapse of the token's value. With this in mind, the STARSHIP team has created a new deflationary token, unlike any other.

STARSHIP is a deflationary utility token, designed to reward community holding, based on the principle of redistribution, token burn, and automatic liquidity acquisition. STARSHIP aims to offer investors of all styles a means of wealth generation through two means:

1. Sustainable value creation by means of the automatic liquidity acquisition and regular token burn
2. Passive income rewards by virtue of the community distribution

So how does STARSHIP deliver passive wealth generation? It does so by design of the STARSHIP smart contract. Here's the rundown of the STARSHIP smart contract tokenomics:

## Transaction Fee

A majority of Binance Smart Chain smart contract projects incur a fee which is allocated for a variety of purposes, with 10% being a common figure. With regard to the STARSHIP smart contract, 10% of all transactions (including purchases, sales, and transfers) is charged to fulfill the STARSHIP smart contract conditions of redistribution and liquidity acquisition.

## Community Redistribution

50% of the tax (5% total of all transactions) is redistributed to holders. The size of the reward is conditional to the number of tokens held. Hence, holders are rewarded not only for how long

they hold, but also for the number of tokens held. This mechanism is the second incentive to hold STARSHIP alongside the first incentive of stable investment growth.

### **Liquidity Acquisition**

The second 50% of the tax (5% total of all transactions) is placed into a locked, verifiable liquidity pool (LP). The LP increases the price floor and improves value stability, providing price support during periods of volatility. The lock will be verifiably renewed prior to the expiration of the liquidity lock on December 31st, 2022, and thereafter prior to future liquidity lock expirations.

### **Token Burn**

Burns will be performed on an as-needed basis, and they will be announced to the STARSHIP community in advance. Burns will reduce the number of STARSHIP, which in turn will increase scarcity and further increase the price. With a maximum supply of only 20M tokens, STARSHIP value potential burns bright, especially considering the large portion of token burn with respect to the maximum supply of STARSHIP token.

### **Community Redistribution Explained**

With STARSHIP, every transaction, whether buying, selling, or transferring amongst wallets, incurs a 10% transaction fee. This fee discourages excessive trading like scalping by whale investors, helping to stabilize the price and incentivize holding. With this fee, loyal STARSHIP holders are rewarded with free STARSHIP, deposited directly into their wallet with no action required on their part. The amount each holder receives of the community distribution is proportional to the amount of STARSHIP they hold in relation to the total circulating supply of STARSHIP. This, along with the liquidity acquisition provided by the transaction fee and the regular burn of STARSHIP tokens, offers extremely lucrative passive income when compared to the initial investment position entered into by the holder.

Welcome to STARSHIP, where we have the best tokenomics and the ecosystem to match. Starship is a deflationary coin which rewards holders in multiple aspects.

- Holding in a less-than-ideal market: The price of STARSHIP is lower. Thus, the volume of STARSHIP traded or transferred increases, and, as a result, the amount redistributed is higher.
- Holding while the price of STARSHIP rises: Holders enjoy the benefit of the value of their distribution per token increasing.
- The longer an investor holds, the more automatic distribution of STARSHIP is awarded, as per the rules of compound interest.

Now, imagine a cryptocurrency offering BOTH *compound interest* AND *use cases*.

STARSHIP will further build upon its liquidity via partnerships with other projects and teams which will add significant amounts of liquidity beyond trading and transaction fees. Partnerships or arrangements with a DEX, Casino, NFT game and Wallet have already been made. Think ETF or holdings company. Or maybe, a gold backed dollar where the amount of

gold an individual dollar or, in this case, STARSHIP is backed by increases every transaction or liquidity deposit.

Introducing STARSHIP partnerships: With the upcoming Launchpad DEX, STARSHIP Wallet, and STARSHIP-themed NFT game, Starship is poised to acquire a dominance that other meme-utility tokens can only dream of.

### **STARSHIP Wallet**

This is a partnership formed with an existing wallet we will license and rebrand as the STARSHIP Wallet (scheduled for launch in Q3). This will further bolster liquidity. Not only will the STARSHIP Wallet allow the exchange and transfer of the most popular cryptocurrencies, it will feature perks not readily available with traditional wallets such as TrustWallet and MetaMask. Wallet transaction fees will be added to STARSHIP's liquidity, and holders will continue to enjoy the redistribution benefit while using the wallet in the ecosystem--all while receiving the benefits of adding to STARSHIP liquidity, even when exchanging other cryptocurrencies.

### **STARSHIP LaunchPad DEX**

Another Partnership in development is the LaunchPad DEX (short for Decentralized Exchange). This exchange will operate on the Binance Smart Chain network and as with the wallet, a percentage of the DEX's fees will go into STARSHIP's liquidity. The DEX features a token creator which will generate additional liquidity through automated ownership of tokens created.

### **DEX TOURNAMENT**

STARSHIP community members have also made a deal to sponsor a 16 team token creation tournament, similar to march madness. STARSHIP will receive a portion of the profits generated and a percentage of the tokens created.

### **NFT Game**

Join us on an adventure across the galaxy where holders can travel the starship universe with their own fleet of starships and battle for prizes.

With the StarShip wallet you will be able to play our exclusive NFT game using StarShip tokens to purchase NFT's which can be staked for fuel. This will allow you to explore the solar system, colonize planets, acquire rare NFTs, and engage in epic battles. There will be a hidden star in the game that has \$50,000USD in BTC hidden inside of it. This will make the game a run for the planets, and to get to the planets you need Keyanite, the fuel that can be earned or bought with STARSHIP.

### **CASINO**

Arrangements made for a casino to use starship tokens in transactions/gameplay. We do not operate, directly condone or promote gambling on our digital infrastructure. But it is very beneficial for our token to be utilized, especially for our token holders.

As you can see, STARSHIP's multiple liquidity funding streams and its myriad of use cases set it apart from the rest of the deflationary pack. STARSHIP truly knows no bounds. On to the next galaxy!

**RoadMap** - Shows the progress of the game, wallet and launchpad since each have their own respective dates

**Corporate Sponsors** - can claim a planet which will be used to market their own products and for exposure in the Starship universe

STARSHIP token is **community lead**. Members of the community have brought projects that will utilize STARSHIPs tokens. This will increase volume and liquidity. Some deals made with platforms are for promotions in exchange for a percentage of profits which are then deposited into the STARSHIPs liquidity pool.
